ABSTRACT

A method of generating charging data in a data network, and a data network are provided. The method comprises: transmitting data generated by a content provider in a content server to a node of a data transmission connection used by a connection provider; transmitting the data of a service entity generated by the content provider from the node through the data transmission connection used by the connection provider to a subscriber terminal; identifying in the node individual transactions in the data to be transmitted to the subscriber terminal; transmitting the identification information of the identified transactions from the node to the charging information system of the connection provider; identifying in the charging information system the individual transactions in a chargeable service entity; generating in the charging information system one content ticket for each identified service entity, and using the content ticket in billing for the service entity.
